Chorducopia Overview

Chorducopia is like the PC or Mac version of that trusty tattered chord notebook in your guitar case—only better. When you are writing and you have that perfect sound in your head, but can't quite translate it to your fingers, Chorducopia can help.

With over nine-hundred chords hand-diagrammed and recorded in every key, Chorducopia offers the songwriter or student access to the essential elements of songwriting. Just click on a chord symbol and hear the chord played by a variety of instruments and in different voicings.

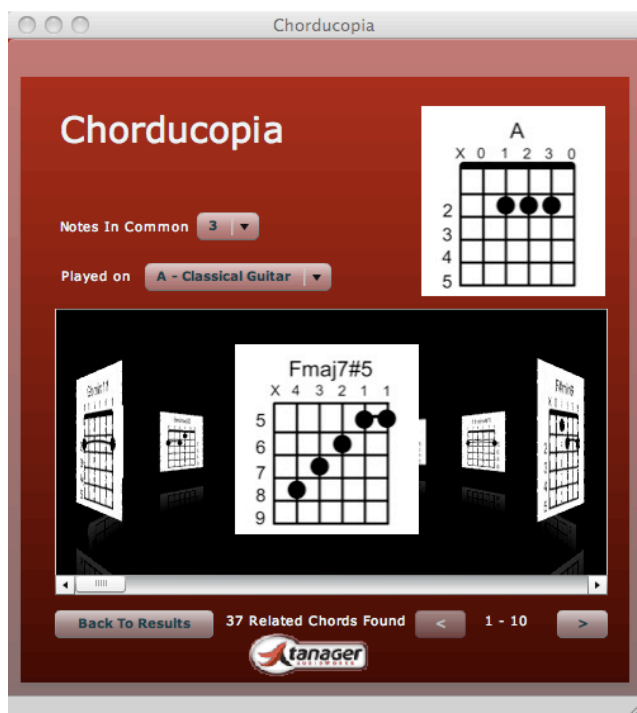

Browse through chords, filter them by key or a variety of other methods, or search for just the one you are looking for—then listen to them. Chorducopia can show you chords related to what you have found for that extra bit of inspiration. Songwriters - choose the "Key" mode and you'll be presented with a rich palette of chords that work well together if you are writing rock, pop or country music. Listen and compare chords that share notes in common as well - perfect for finding that ideal substitute chord to really refine your progressions.

Care has been taken with every chord, in every key to provide the most useful and accurate representation. And it sounds great too. We have put great attention to detail into the recording of every chord. We offer chord voicings made up from the formal notes contained in the chord formula as well the actual chord fingering shown in the included fretboard diagrams.

All recording was done using state-of-the-art equipment and the results can be heard. Instrument, cabinet, reverb, attack and spread of individual notes in the chord have all been carefully selected for the clearest and most useful representation. For more information, log onto our website at www.tanageraudioworks.com.

We want to make our tools not only the easiest to use, but ones that exemplify their greatest asset. You.

Get the idea out of your head and into your song.

Product Specifications

- Runs on Windows XP/Vista PC's and PPC/Intel Macs.
- Contains 990 chord sounds (55 in each enharmonic key name.).
- Chord Sound library contains 2 banks of 3 instrument sounds each (almost 6000 files.)
